## **Brow Microblading Aftercare**

### Aftercare

- Keep the treated area moist for 7 full days following the procedure by continuing to apply, ONLY the aftercare that is provided regularly, during the day, with a Q-tip. Remember, the ointment acts as a “bandage” and keeps out dust, pollen, and air. Clean area with cool water and mild antibacterial soap (Dial), and pat dry before reapplying ointment.
- Do not expose treated area to sun or a tanning booth, for 2 days.
- Absolutely NO Neosporin, no cleansing creams, makeup, or chemicals may be applied to pigmented, treated areas for the first 3 days.
- No hot, steamy, full pressure showers, saunas, excessive sweating, Jacuzzis or swimming in chlorinated pools. These things can hinder the color bonding process.
- No Retin-A, bleaching creams, glycolic acids, fruit acids or AHA acids on the treated area.
- If crust appears on the procedure area, do not pick or peel the crust off because color will be removed along with the crust. Do not touch the procedure area with fingers as the fingers could transmit bacteria onto the area and lead to infection. This could ultimately incur some additional expenses to you.
- Don't sleep on a nice pillowcase for the first two nights. Ointment and pigment can get on it.
- After 7 days you may apply makeup.
- If you are a blood donor you cannot give blood for 1 year. Following your procedure (Per American Red Cross).

*Failure to follow post treatment instructions may cause loss of pigment, discoloration, or infection. Remember, colors appear brighter and more sharply defined immediately following the procedure. As the healing progresses, color will soften. A touch-up procedure may or may not be necessary. Final results cannot be determined until healing is complete. Touch-up procedure*

**I understand that at the first sign of an infection, adverse reaction or allergic reaction to this procedure, I must notify the Office (770) 360-8881 or Allene Bagwell (678)689-6008.**
